## DETAILED ACTION

### Remark

1. This communication is responsive to the amendment and response filed on 4/17/2006. Claims 1-9 are presented for examination.

### *Allowable Subject Matter*

2. Claims 1-9, after further consideration and search, are allowed over the prior art.

### Reasons for Allowance

3. The following is an examiner's statement of reasons for allowance:

The Danks reference teaches the equivalence for controlling a pose of a three-dimensional (3D) object including one or more interconnected elements and computes, for a bone, distance, and rotation with respect to a parent bone (see col. 3, line 66 to col. 4, line 20 and fig. 1). However, the Danks reference, as argued by the Applicant in the 4/17/06 response, fails to teach positioning multiple three dimensional structures along a path in a 3D model and determining a direction and an amount of roll around the direction for each intermediate position along the path using quaternion interpolation between the roll of a first pose and the roll of a second pose, wherein each three dimensional structures is associated with a different intermediate position along the path and a direction at its intermediate position (as recited in claims 1, 4 and 7).

A newly found reference assigned to Kroitor (US 6577315) teaches controlling a three-dimensional (3D) object to generate a plurality of interconnected elements poses derived from source poses and positioning the poses along the path of the 3D space (as

defined by figs. 4-7. See col. 2, line 44 to col. 3, line 66). However, like Danks, Kroitor fails to teach the above underlined features of the claimed invention. Accordingly, the limitations of claims 1, and 3-20 are allowed over the prior art.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
